

Front End Engineer

GLFX Inc, a Financial Technology Services firm, is seeking a Front-End Software Engineer to develop exciting projects in FinTech and E-Commerce space.

The Role

As a Front-End Software Engineer, you will be instrumental in developing key customer-facing aspects of GLFX company products, with heavy focus on user experience, data visualization, and interface design. You will be working closely with founders and product designers to define long-term vision for these products on desktop and mobile platforms.

You will regularly interact with users and your teammates to design, develop, and implement applications that solve various needs. You will take ownership of your code and always look for ways to improve it.

Things We Look For

- You are a strong developer with 2+ years of experience building web-based applications with emphasis on the front-end.
- No matter what your favorite stack is, you write clean and efficient code and can clearly explain reasons behind your approach and decisions.
- You believe that all software should be beautiful and are ready to work to make it so.
- You can explain the difference between UX and UI.
- You enjoy working with others and love getting feedback.
- You are eager to learn and grow your skills and knowledge.
- You have a sense of urgency and feel comfortable working in a fast-paced environment.
- You are empathetic and strong communicator.

Bonus Points

- You have an academic background in computer science, math, or finance.
- You have good knowledge of JavaScript, SCSS/LESS, or Python.
- You have worked with React, Ember, Angular, or similar frameworks in the past.
- You worked on data visualization problems in the past utilizing frameworks such as D3.
